### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Edward A. Gordon on March 14, 2005.

The application has been amended as follows:

3. (Currently Amended) A communications node ~~by subtracting the RSSI from a predetermined maximum power~~ in a network including a plurality of nodes, said communications node including a transceiver to transmit and receive messages and having at least one communications link with a first node of the plurality of nodes, said communications node comprising:

an electronic memory circuit having network information stored therein;  
and

an electronic processor circuit which (i) determines path loss information across the at least one communications link by evaluating power data, including a received signal strength indication (RSSI), corresponding to a message received from the first node, the evaluating including subtracting the RSSI from a predetermined maximum powers; (ii) distributes the path loss information to the network; and (iii) routes messages to the network based on path loss information.

15. (Cancelled)

16. (Currently Amended) ~~A method according to Claim 15~~ A method of operating a communications node in a network including a plurality of nodes, the communications node including a transceiver to transmit and receive messages, the communications node having at least one communications link with a first node of the plurality of nodes, said method comprising the steps of:

determining path loss information across the at least one communications link by evaluating power data, including a received signal strength indication (RSSI), corresponding to a received signal from the first node, wherein the path loss is determined by subtracting the RSSI from a predetermined maximum power;

distributing the path loss information to the network; and

routing messages to the network based on path loss information.
